GIROUX TO HAVE BIG POWER PLANT

Telluride Power Company Has Made Final Inspection at Point Near Ely.

CLEVELAND CREEK TO SUPPLY ENERGY

for All Ely Camp and That Vicinity.

struction of an immense plant for generating electric power to operate the rection works of the Giroux Consoliin this district will be ced in the spring by the Tellu-Power company, of which L. L. president. The plant will be ecated on Cleveland creek about twenty miles due east from Ely, on the eastern side of the Schell creek range, and will capable of developing between 2000

this city.

The generating plant will be located a short distance above the point where the waters of the creek are diverted for irrigation purposes on the big Cleveland ranch now the property of Adams & Mc-Gill The intake of the pipe line by which the water will be conveyed to the generating station will be located a short distance below where the two forks of the creek come together and at an elevation 1200 feet above the station.

The utilization of the waters of Cleveland creek for generating power has been contemplated for a number of years and the Giroux company controlled the rights and did considerable preliminary work there about three years ago. It is reported that after the panic the company forfeited its rights, which have been secured by other parties in the interests of the Telluride company, which has several large plants of a similar nature in Colorado and Utah. The company has been so successful in those fields that it can command all the capital necessary for the new enterprise, and it is stated that it was the intention to send the material to the site this fall, but for an unknown reason the commaterial to the site this fall, in unknown reason the coman unknown reason the comient of work was postnoned until
ear. The stream is one of the
if not the very largest, in the
and the flow is reported to be
and reliable all the year, thus
t the successful operation of a
assed on the minimum flow of the
rest, estimated at twenty-five
feet.

main creek, estimated at twenty-five record feet.

A final inspection of the project was made a short time ago by an engineer representing the Telluride company, who was driven to the power site and made a trip on foot from there up the canyon and across the range to Steptee valley, following the prebable line along which the pole line will be constructed. He is reported to have given the project his unqualified approval. Four hundred tons of pipe, machinery and material will be required for the construction of the power line and the installation of the plant, which will be of the latest design and planned to be operated with a minimum amount of labor. The construction will require the services of a large number of men, who will naturally be drawn from this district.

The execution of this plant will mean.

a great deal for Ely and White Pine county, as it is probable, at least at certain seasons more power can be developed than will be required by the Groux company, which can be furnished to other mining companies at less cost than they can operate steam plants, and it ought to stimulate the mining industry in this part of the county considerably.

LEGALITY OF OLD ACT TO BE TESTED

Nevada Supreme Court Will Be Details of Recent Development Called Upon for Final Decision.

The hearing of the application of H. E. Orr, on behalf of the Charleston Hill National Mining Syndicate, for a survey of the mines and workings of its neighbor, the National Mines company's bonanza property at National, was begun in the district court before Judge E. A Means Wider Power Facilities Ducker yesterday morning, says the

> by Judge B. F. Curler of the Reno law firm of Summerfield & Curler and L. G. Campbell appeared for the National Mines company. The petitioner, H. E. Orr and Richard Kleesattle, his associate

Orr and Richard Kleesattle, his associate in mining operations at National on the property of the company applying for a survey, were present in court, as was also Superintendent R. S. Bolam of the defendant company.

Practically all of yesterday's proceedings were taken up with the arguments of the objection raised by Mr. Campbell to the jurisdiction of the court, the main point raised by him being that no suit had been brought against the National Mines company, and that the statute under which the application for a survey was made did not provide that the court could order such a survey except during the pendency of a suit.

be capable of developing between 2000 and 3000 horsepower. The current will be transmitted over the range to the location of the Giroux plant, which, there is very good reason to believe, will be located in Steptoe valley not far from this city.

The generating plant will be located a short distance above the point where the waters of the creek are diverted for irrigation purposes on the big Cleveland ranch, now the property of Adams & Mc.

Somewhat remarkable in connection

progress this afternoon.

Somewhat remarkable in connection with this proceeding is the fact that the statute under which it was brought, passed by the legislature in 1863, has never been tested in the state supreme court on this point of a district judge's power to order a mine survey without a suit being first brought by the person making the application. It is considered that the supreme court will be called upon to decide this point, whether the application for the mine survey is granted or denied.

COPPER OUTPUT WAS

Hayden, Stone & Company say that the preliminary estimates of the country's copper production show an increase over the figures of 1999, for which reason the heavy decrease in the surplus supplies of the metal is all the more significant, pointing, as it does, to a constantly broadening use for this commodity. The heavy consumption of copper in the rather lean year which has just closed tends to but further emphasize the opinion that in times of pormal prosperity

tion as to the metal is all the more significant, pointing, as it does, to a constantily broadening use for this commodity. The heavy consumption of copper in the rather lean year which has just closed tends to but further emphasize the pointion that in times of normal prosperity there will be a good market for all the copper that can be produced at a profit on the present selling price.

For 1910 Arizona will head the list of copper producers, while for the year now being entered upon its position will be strengthened by such acquisitions to the active list as Ray Consolidated and Miami, at both of which the finishing touches are being applied at about 14,000,000 000 pounds.

The biggest increase in production this year comes from Biah, the figures being placed at about 20,000,000 pounds.

The biggest increase in production this year comes from Biah, the figures being placed at about 20,000,000 pounds.

The biggest increase in production this year comes from Biah, the figures being placed at about 20,000,000 pounds.

The biggest increase in production this year comes from Biah, the figures being placed at about 20,000,000 pounds.

The biggest increase in production this year comes from Biah, the figures being placed at about 20,000,000 pounds.

The biggest increase in production the synthesis of the red world's largest known deposit of the red world's largest known deposit of the red world's largest known deposit of the red world is largest from II,000,000 to 15,000,000 pounds.

The position of the pear to prophyry.

The new production assured for 1311 will not be of such volume as to be a disturbing factor. This lacrease will come largely from the new porphyry mines of the southwest, and may be partially officed of the southwest, and may be partially officed of the southwest and may be partially officed of the peace of the southwest and may be partially officed of the south

The copper industry eccupies a much stronger position than a year ago, and should be among the first to share the benefits of a return of general business and in the campaign which has been started in the west, where a blanket request has been made to all disreputable promoters who may be engaged in the traffic of selling chanceless mine securities to get out and get into another line of business. If they will only give the mining business half a show you will find that as it is conducted by the legitimate and business-like element, carnings of a substantial character are shown in it from year.

The new crusade has for its object the making of disreputable promoters realize that as people are getting more and more roosted regarding the delinquencies of their promises, they are unable to sell-like ware on at all the same satisfactory basis as prevalled heretofore, and as a natural consequence, an carnest effort is going to be imade to switch them into other lines of work. It may sound over polite to ask a knave to change the scenes of his operations, but as long as investors can get him out of the mining business, they will feel happy at knowing that he has at loast been removed from their precinets.—Mining Age of New York.

YELLOW TIGER HAS FILED ITS REPORT

Given in Statement to Stockholders.

mine manager in Goldfield, J. W. Bates ant developments in the mine. port is as follows:

are herein giving you the latest infor mation in regard to operations at the Yellow Tiger property at Goldfield, Nev Manager Bates has the following to say in regard to an important find that has

"We have just shot into we have just shot into some stuff in the crosscut at a depth of 700 feet that is better than anything we have ever had at this depth in the Tiger ground. This is a black copper ore, and in addition to carrying low gold values also carries values in silver and copper. I am developing this new find, but have not yet determined its extent. There is a good-sized streak of this ore, and it is characteristic of the high-grade ores of the Goldfield district. It may be a shoot from a large ore body. Assays from this shoot have given the first indication of copper that we have bad in the Yellow tiger ground. The copper runs as high as 9 per cent. This is a very favorable condition from the fact that when copper values come in, it indicates permanency. This copper is the greatest indication we have ever had of getting into a high-grade ore body, and it would not surprise me if we find something on the hanging wall of the hig 100-foot ledge that will put us on easy street. The gold values are low, but I am confident that by drifting on this black copper into the hill the gold values will increase and we are liable to find high-grade at any time. The ore we have opened is the characteristics ore of the district and is identical in looks with the high-grade of the Mohawk and Florence.

"I want to push this crosscut on to the crosscut at a depth of 700 feet

I want to push this crosscut on to the wall, even though we go through this streak of gold-silver-copper ore and it may be possible that we will fine high-grade on the hanging wall. This hanging wall is on the contact between the Militown andesite and the latite and dactic of the ledge now being crosscut I will keep you fully advised as to values."
